

## Table of Contents

### Book 1

9	The chronology of the development and use of corrosion-resistant alloys	141	Properties and applications of a nitrogen-alloyed superaustenitic filler metal
19	Experience with supermartensitic stainless steels in flowline applications	147	Type '300H' austenitic stainless steel weld metals for high-temperature service
27	Application of corrosion-resistant steels in the chemical industry	163	Metal dusting in the heat treating industry
43	Experiences in the process industry with corrosion-resistant alloys (CRAs) from an engineering perspective	167	The evaluation of 12% chromium steel turbine blades materials' susceptibility to stress corrosion cracking
49	Global procurement of 'standard' piping materials	175	Stainless steel behaviour in a geothermo electric plant
53	Technical and commercial comparison between CRA-lined pipes and solid duplex and supermartensitic 13% Cr steels	181	Design of a sluice door in stainless steel
57	Stainless steel explosion-bonded clad applications in the oil and gas industry	189	EDF's choice of material for FGD chimney at Le Havre power station
59	High-strength corrosion-resistant nickel base alloy oil country tubular goods and bar products for oilfield applications	195	Laboratory evaluation of corrosion properties of ferritic stainless steels in automotive exhaust systems
65	Use of stainless steel to reduce cost of piping systems based on total design considerations	203	Some superaustenitic applications
79	Cold forming as fabrication method for piping systems	213	Toughness and fracture mechanics evaluation of austenitic stainless steels for cryogenic application
85	Expectations of engineers and designers vs reality after fabrication	219	Welding superduplex stainless steels with flux-cored and metal-cored wires
91	Properties of a high-strength superaustenitic stainless steel for application in the oil and gas industries	237	Weldability and corrosion studies of AISI 316L electropolished tubing
95	Qualification of manufacturers of special alloys for Norwegian oil and gas developments	247	GTAW hot wire process for thick-walled austenitic stainless steel nuclear components
111	Pitting corrosion of weldments in high-nitrogen austenitic stainless steel	257	Investigation of underwater welding of stainless steels
125	Stress corrosion cracking in Hastelloy(r) B2 weld metal	267	Laser welding of heavy section duplex stainless steel grade 2205
131	Microfissures in superaustenitic stainless steel weldments and their effect on fatigue properties	275	Selection of nickel alloy welding products to provide maximum performance
		285	Advanced welding technology in stainless steel grades

- 295 Modern products, designed for welding stainless steel
- 303 Welding of stainless cargo tanks for chemical carriers
- 311 Welding austenitic stainless steel cryogenic vessels and tanks
- 315 All-position stainless steel cored wires
- 325 Properties of martensitic stainless steel line pipe welds produced by non-arc welding process
- 331 Development of weldable martensitic stainless steel line pipe by HF-ERW process
- 341 Efficient welding of supermartensitic stainless steels with matching composition consumables
- 355 Weldability and fracture toughness of three martensitic 13% Cr stainless steel grades
- 369 Evaluation of Waveform Control Technology(r) for nickel alloys in flue gas desulphurisation (FGD) scrubbers
- 383 A critical study of metallurgical design of 410 NiMo martensitic SS welds
- 391 Stainless steel surface treatment and corrosion resistance
- 393 Wear resistance of high-nitrogen martensitic stainless steels in a sand slurry environment

## Book 2

- 409 Consumable selection for stainless steel joints in chemical carriers
- 415 Experiences with Nicrofer(r) 5923 hMo/Alloy 59/UNS N06059 in the chemical process industry
- 421 Influence of some experimental parameters on uniform corrosion rates measured for high-alloy stainless steels
- 435 A highly corrosion-resistant 6% molybdenum austenitic stainless steel for chemical process applications
- 443 Corrosion behaviour of alloy 33 in concentrated sulphuric acid
- 453 Thermal mishandling of high alloyed stainless steel
- 467 Chemical cleaning of stainless steel equipment operating in aqueous environments
- 473 Some duplex applications
- 487 Shedding new light on titanium in CPI construction
- 499 New developments in 6% Mo stainless steels
- 507 Thermal modelling of Zeron 100(r) superduplex stainless steels
- 519 SAF 2507 in seawater
- 529 Crevice corrosion testing of stainless steels
- 539 Stainless steels for corrosion control in the petrochemical industry
- 549 Stainless steels versus naphthenic acid corrosion in petroleum refining
- 555 Optimising metal bellows expansion joint performance in refinery applications
- 563 Mechanical and chemical properties of 353MA
- 573 Martensite prediction in stainless steel weld cladding
- 585 Pitting resistance of large-size components from 6% Mo clad plates for severe corrosion demands
- 587 Cost-effective submerged arc welding of stainless steels with alloying fluxes
- 595 Novel single-layer strip weld cladding procedures
- 613 Experiences with Zeron 100(r) superduplex stainless steel in the process industries
- 625 Solution-nitrided stainless steels for pump applications
- 643 High-molybdenum stainless steels resist chloride stress corrosion cracking in food and beverage production
- 655 Development of a cast, cathodically modified superferritic stainless steel for sulphuric acid applications
- 669 Composite tubes in waste incineration boilers
- 679 Experience with alloy 45 TM in thermal waste treatment plants
- 681 Performance of corrosion-resistant weld overlays in power boilers & kraft recovery boilers
- 689 Nitrogen influence on structure and corrosion-mechanical properties of Cr-Mn stainless steel
- 693 Demonstration test of new corrosion-resistant superheater tubings
- 711 A model for corrosion of the depleted zones around sigma precipitates produced during welding of superduplex stainless steel
- 721 The effect of microstructure on brittle fracture and stress corrosion cracking in duplex stainless steel
- 729 Metallurgical examination during weld procedure qualification for ferritic-austenitic stainless steels
- 739 Comparison between GTA and CO2 laser beam welding of duplex stainless steel
- 753 Continuously cast long products made of innovative stainless steels
- 763 A new high-nitrogen stainless steel for surgical implants

771 New metal forming procedure for high-alloy  
corrosion-resistant steels

783 Automatic inspection guarantees highest  
surface qualities
