

# Raccortubi Group

Raccortubi Group manufactures, stocks and supplies piping materials destined for critical applications such as chemical and petrochemical plants, oil installations, power plants, shipyards, urea plants and offshore platforms.

With the acquisition of Petrol Raccord at the end of 2014, the Group now consists of seven companies and has a manufacturing range for butt weld fittings which extends from ½" to 56".

## Synergy

Raccortubi Group comprises both stockholding and manufacturing facilities to offer customers added value.

The Group's global distribution network, with stocks in Europe (Raccortubi), Brazil (Raccortubi do Brasil), the Middle East (Raccortubi Middle East) and Southeast Asia (Raccortubi Singapore), supplies pipes, tubes, fittings and flanges in stainless steel, duplex, superduplex, superaustenitics and nickel alloys. Over 6,000 items in a wide range of diameters and thicknesses are available in stock for immediate distribution.

Such stocks provide both ex-stock materials to customers and raw material to the Group's internal production facilities. In turn, the integrated Tecniinox and Petrol Raccord

manufacturing plants offer a wide range of butt weld fittings, as well as customised products in accordance with client specifications, to short timescales. Adaptive planning and flexibility mean that the Group can insert any extraordinary order into production on demand, whilst simultaneously providing consistent stock replenishment.

## Quality

The Group's internal technical specifications have been engineered to guarantee the manufacturing and stockholding of materials in full compliance with the vast majority of Oil & Gas end-user requirements. This means that Raccortubi customers can benefit from the off-the-shelf availability of fully-tested and certified products. Indeed, the Group's

integrated production benefits from its own internal laboratory, which alongside the exclusive use of European base material ensures the distribution of top-quality butt weld fittings.

Both stockholding and manufacturing activities have ISO 9001:2008 certification, whilst Group production facilities have also been certified to PED, ASME and NORSOK M-650 Ed. 4 specifications. Raccortubi Group companies hold further numerous international end-user approvals for the most sophisticated fields of application.

## Personalisation

Thanks to years of experience and expertise within the industry, Raccortubi Group is able to customise orders on the basis of individual client needs. The Group offers solutions for complete project packages as well as single item necessities. It provides colour coding, cutting, extra testing, special packaging and marking to ensure that it is able to respond to the most varied of customer requests.
