

# Salzgitter Mannesmann Stainless Tubes GmbH

A combination of passion, an ever-present consciousness of our responsibility, and a great historic background influences Salzgitter Mannesmann Stainless Tubes (SMST-Tubes) on a daily basis.

Today, SMST-Tubes stands for a combination of high quality products for critical environments together with efficient and reliable services. Customers enjoy a supportive personal account management.

Ongoing cycles of investment ensure the latest technical standards in production technologies. This creates trustworthiness to equip the so called "critical spots" of customers' plants, products and processes with the special qualities of our tubes and pipes.

Customers profit from one of the most comprehensive product ranges in our business:

- from small instrumentation tubing to large pipe sizes with outside diameters from 6 to 250 mm (from 0.24 up to 9.84 inches) and with wall thicknesses from 0.5 up to 50 mm (from 0.02 up to 1.97 inches);
- in materials from standard austenitic stainless, duplex and super-duplex steels to highly sophisticated nickelbased alloys – this variety offers highest corrosion resistance, heat resistance and/or high-temperature, high-strength materials.

Quality management begins well before any production step. From the raw material up to the final quality tests in our own state-of-the-art laboratories on the finished product: we thoroughly evaluate, test and control our pipes and tubes, validating full compliance to the individual customer requirements, thereby minimising industrial risks and optimising performance.

In every case, we apply our knowledge within a tailored approach - which our customers expect from a professional supplier. SMST-Tubes encourages contacts with our clients in order to have a first hand understanding of their priorities and concerns on any given project, as we believe this is critical to best address those aspects. Our technical teams, in tandem with our commercial teams, will endeavour to provide cost effective and accurate proposals subsequently honoured by our production, quality and logistics teams during the execution of your contracts.

This extent of interface in between our organisation and yours helps to foster long term mutually beneficial partnerships.

## Products & Target Industries:

Pipe and Tube  
Hollow Bar  
Furnace Tube  
Boiler Tube  
Heat Exchanger Tubing  
Instrumentation Tubes  
OCTG  
Umbilicals  
Oil & Gas  
Chemical  
Petrochemical  
Power Generation (conventional & nuclear)  
Fertilizer  
Mechanical application  
Environmental technology  
and many more
