

Stalatable Ltd

Use our strength - with over 40 years of experience!

Stalatable's know-how is based on many years of experience: the company has been in the business for over 40 years. During these four decades has been created an international distribution network spanning all continents and 45 countries. The company's head office and production resides in the Finnish town of Lahti, sales offices can be found in the USA, the Netherlands, and India.

How does Stalatable define service?

"We want to give our customers added value. Stalatable provides support for end users across various sectors of industry together with our dealers and stockholders. By cooperating with our shared customers, we can offer more know-how and better individual services – from planning a project, right up to its implementation", explains marketing director Sami Packalén. Because increasingly complex projects for example in oil and gas production continue to demand more than ever from materials, custom solutions are needed. Stalatable is already involved in the first planning steps.

The company has aimed its service strategy to meet this trend: instead of simply selling six meter long standard tubes, customers can order custom-made components, which can be used as soon as they arrive on-site. Sections can be cut, welded, angled to match, or be perforated where wished, before delivery. This reduces the amount of

waste material on building sites and reduces costs. Thanks to its increased capacities, Stalatable can also fulfil short-term orders.

The company produces and processes all types of stainless, regardless of whether it's ferritic, austenitic, or duplex. Stalatable also develops and processes high-quality special grade materials. These special grades can be used across a wide range of applications. Stalatable's products are used, for example, in the oil and gas industry, transport, waste water treatment, and in seawater desalination plants.

The company is known worldwide as a maker of high-quality stainless hollow sections. Diameters range from 20 × 20 mm to 300 × 300 mm and from 30 × 20 mm to 400 × 200 mm. Wall thicknesses between 1, 2 and 12 mm can be produced. In total, the product line contains up to around 600 products. In the last years, Stalatable has invested heavily in its production capacity.

This has allowed the company to offer hollow sections even with a diameter of 1000 × 1000 mm. High-quality materials, years of experience, fast delivery times and custom-made products, not forgetting the professional staff, are without doubt the strengths of Stalatable.

Facts & Figures

Company Name:	Stalatable Ltd
Founded:	1972
Head office:	Lahti, Finland
Production:	Lahti, Finland
Company president:	Jukka Nummi
Employees:	130
